

RUFUS ANDREW'S CHARGE.

RELIVING UPON THE SHAFER TO BRING THE NECESSARY PROOF.

Mr. Andrews Questioned by Mr. Potter—Judge Hill—Mr. Andrews Said to be Sick in his Country Home—The Lebanon Springs Railroad.

Ex-Judge Hill, in the lobby of the St. James Hotel and talked with Albertus Ferry and others before the inquiry into the official duties of Judge Westrook was resumed by the Assessor's Judiciary Committee yesterday.

It was in that suit as attorney for the vindication of the character of Mr. Clark H. Chapman and of Mr. Kneeland, whose characters were assailed. I examined the papers and thoroughly satisfied myself as to the character of the charges.

Mr. Andrews was asked to state what were the facts within his knowledge in reference to his statement, which affected, in a way, the judicial character of Judge Westrook.

Mr. Andrews said that he had no personal knowledge of the facts you allude to—I don't pretend to know anything about the matter.

Mr. Andrews said that he had no personal knowledge of the facts you allude to—I don't pretend to know anything about the matter.

WORK IN THE RIVER TUNNEL.

A Startling Incident of its Progress which was Kept from the Public.

The engineers in charge of the Hudson River tunnel now pronounce the experiment of boring from the New York side, on substantially the same plan as that already adopted on the Jersey City side, to be a complete success.

While they have been coming to this conclusion the work has been carried on at the outlay of much perseverance and not a little risk, and has been marked by one startling occurrence which has not before been made public.

The thought in charge, George Smith, did not have entire confidence in the plan of working with compressed air in the sandy, loose soil at the New York end of the tunnel. He feared that the air would work its way through the soil and that the water could not be kept out while the workmen were building the tunnel.

Several new expedients have been adopted to prevent similar accidents. The tunnel is now bored with compressed air, and the water is kept out by a system of pumps and valves.

There has been several changes in the engineers. S. H. Finch, engineer in charge, is now assisted by Mr. Raymond and Charles W. Carr.

There has been several changes in the engineers. S. H. Finch, engineer in charge, is now assisted by Mr. Raymond and Charles W. Carr.
